

### **Practical Activity:** What's missing?

**Description of the Practical Activity:** Memories provide children with lots to talk about, which in turn enhances their language skills. Parents can play puzzles as they provide children with the opportunity to acquire their problem-solving skills (they realize where pieces fit or do not fit); or memory. This game allows parents to boost their kids' minds. It is a fun memory activity that can be played using different objects, for example household objects or small toys. It can also be done at the restaurant, or while you are making dinner, with whatever you are using in that moment (forks, napkins, teaspoons etc.). Parents can also play with shapes, colours, numbers, letters (e.g. "What colour/shape/number is missing?")

For this activity, parents need to test kids' memory skills by placing a few objects in front of them and allowing the kids to look at them. Then parents need to ask kids to close their eyes while they remove an object. Kids have to see what object is missing.

The "What's Missing?" Memory Activity for Kids
